

Boiler Water Treatment Chemicals

Warranium Energy provides technically advanced boiler water treatment chemicals at an economical cost, which have been scientifically formulated to improve the operation and maintenance of wide range industrial boiler systems and steam generation plant by proactively dealing with the issues related to the utilisation of water including scale development, metallic corrosion, boiler water carryover and sludge deposition. We offer guidance and recommendation for trading a wide range of system which helps to increase system efficiency, decrease plant downtime and maintenance costs, and extend equipment life.

PRODUCTS	APPLICATIONS
Antiscalant	Magnificent online cleanliness of boiler internals by preventing scale, metal particles and metal oxide deposits formation.
Bio-dispersant	Effective in dispersing microbiological slime, debris and enhancing the efficacy of oxidising and non-oxidising biocides.
Oxygen Scavenger	It prevents the iron deposits in the boiler by converting harmful ferric irons to the ferrous state.
pH Booster (Alkalinity Builder)	Increase the boiler water pH to the desired operational deposits into suspended particles.
Fireside Solid Fuels	Powder chemical additive designed especially for Solid Fuels like coal/petcoke fired units to reduce unburnt carbon in both fly ash/bottom ash and reduce soot emission, sulphur corrosion while maintaining the boiler in good condition.
