

## Cooling Water Treatment Chemicals

Warranium Energy provides the comprehensive range of high-performance cooling water treatment chemicals with an assessment of the process, water chemistry, cooling requirements and metallurgy in your industrial cooling system, which have been scientifically formulated to deliver significant operational advantages and execution upgrades to cooling towers, and open and closed cooling systems that use water as an essential coolant.

We offer extensive ranges of formulated chemicals for cooling water treatment applications, which are effectively used to reduce and prevent issues in industrial cooling water systems.

PRODUCTS	APPLICATIONS
Antiscalant (Corrosion Inhibitor)	It keeps the suspended matter in dispersed condition avoiding deposition in heat exchangers.
Oxidising Biocide (Micro-Biocide)	An oxidising micro biocide in powdered form, highly effective against a broad spectrum of micro-organisms.
Non-oxidising Biocide	Highly effective non-oxidising biocide used for a wide range of aerobic/non-aerobic micro-organisms, algae and fungal control.
Bio-Dispersant	Effective in dispersing microbiological slime, debris and enhancing the efficacy of oxidising and non-oxidising biocides.
